The Move That Matters
"They Say / I Say"

Third Edition
of career education. I may be their counselor. I may be helping them find the best career path, but career education today is different from when we were in school. It is a process of exploration. It is about helping students identify their interests and strengths, and then helping them develop skills that will allow them to pursue those interests.

President, my reaction to this position sanctions. From my vantage point as a liberal arts college head, my career education today looks a lot like what we had in the past. However, it is constantly evolving. The world is changing, and career education must change with it. Our students are living in a world where technology is rapidly advancing, and they need to be prepared to adapt.

But the career, it seems, is not the only thing that is changing. The economy is also in flux. The job market is constantly shifting, and our students need to be prepared for that. Career education is about more than just finding a job. It is about preparing students for success in a rapidly changing world.

The New Liberal Arts
The New Liberal Arts

Misconception No. 1: The liberal arts are particularly relevant for low-income and first-generation college students. Therefore, they are worth the time and effort. This is not true. Critical and creative thinking is valuable, but the humanities and liberal arts are not necessarily relevant for all students. For example, a student who wants to pursue a career in engineering or business may not find the humanities as relevant as someone who is interested in the arts or humanities. The liberal arts are important for everyone, regardless of their background or future plans.

Misconception No. 2: College graduates are finding it harder to get good jobs with liberal arts degrees. While this may be true for some fields, many liberal arts graduates are finding success in a variety of careers. Some employers value the critical thinking and problem-solving skills that liberal arts graduates develop, while others may see the creativity and flexibility that these degrees foster as valuable.

I was wondering if you could explain the process of how you review and make changes to the article. Specifically, I'm interested in understanding how you decide which sections to revise and which to keep.

I appreciate your feedback and look forward to discussing these changes in more detail.

Thank you,
